MINE ACTION DATA CATALOGUE

Know what information is recorded.

Understand its limits.

Submit a focused request.

6

dataset categories

54,371

point records

478

hazard records

Source snapshot: 6 October 2026

Revised public edition: 7 October 2026 | Version 1.2

Metadata for discovery. Data release remains subject to SEMA review.

sema.org.so

How to use this catalogue

This catalogue helps government institutions, operators, humanitarian partners, researchers and the public describe an information need before submitting it to SEMA.

01**Choose the dataset**

Use the national summary and dataset guide on pages 3-4. Counts show records identified in the supplied source, not records approved for release.

02**Define place and period**

Use the regional summary on page 5, then read the location and time cautions on pages 6 and 8. District or settlement coverage may need verification.

03**Submit an information request**

Use the website form described on page 10. Enter the dataset, location, dates, level of detail and purpose yourself; this PDF does not prefill the form.

NO RECORD IS NOT EVIDENCE OF NO CONTAMINATION

No records identified in the currently available catalogue does not mean a hazard or activity does not exist. Data availability requires verification.

Scope: This is a dated public metadata reference, not a live database or an unrestricted data release. The supplied reference describes queries run on 6 October 2026. This editorial revision reconciles its tables; it does not represent a new IMSMA extraction.

National data snapshot

Four populated point datasets reconcile to **54,371 records** in both the state and region tables. Hazard records are a separate layer and should not be added to the point records as a count of unique incidents or locations.

3,341**Non-Technical Survey**

Survey records

1,641**Mine / ERW Accidents**

Accident records, not a victim count

11,233**Explosive Ordnance Disposal**

Task records, not a device count

38,156**Risk Education**

Activity records, not people reached

478**Hazardous Areas**

478 records; 477 spatially attributed

0***Clearance / Land Release**

No shared records identified

*The original catalogue overview reports zero records in the shared clearance progress / cleared-area layers. The supplied geographic reference does not independently tabulate that layer. This is not evidence of zero clearance activity.

VISIBILITY LIMITS APPLY

Some partner-held records were outside the source review's access scope. These counts describe the accessible source snapshot, not complete national mine-action activity.

Source: supplied IMSMA reference [1]; editorial review, 6 Oct 2026.

Choose a dataset

Use these descriptions to frame a request. SEMA will confirm the available fields, quality, geographic detail and release conditions for the requested extract.

Dataset	Records	What to request / key limit
Non-Technical Survey (NTS)	3,341	Survey summaries and recorded contamination indicators. Verify the relevant survey dates and locations.
Hazardous Areas	478	CHA / SHA summaries and recorded status. Spatial coverage is available for 477 records; status is a snapshot.
Mine / ERW Accidents	1,641	Aggregate accident trends by period and area. Personal and protection-sensitive information requires review.
Explosive Ordnance Disposal (EOD)	11,233	Task summaries and, where releasable, related ordnance information. Task totals are not device totals.
Explosive Ordnance Risk Education (EORE)	38,156	Activity summaries and aggregate reach where validated. Record totals are not unique beneficiary totals.
Clearance / Land Release	0 reported*	Ask SEMA to verify availability. A closed or released hazard record is not a substitute for a clearance output dataset.

AVAILABLE DOES NOT MEAN OPEN FOR DOWNLOAD

Availability describes catalogue evidence. Record-level data, precise locations and partner-restricted material may require approval, aggregation or a data-sharing agreement.

*Shared-layer figure reported in the original overview; see the qualification on page 3. ERW means explosive remnants of war. CHA and SHA are defined on page 7.

Records by region

Point records use the source's recorded region value. Hazard counts use spatial attribution. A zero means no records identified in this source category; it does not establish absence of hazards or activities.

Region / source value	NTS	Accidents	EOD	EORE	Hazards
Bakool	437	146	534	2,106	73
Banadir	29	417	1,694	6,715	21
Bari	0	13	2	38	0
Bay	333	43	946	4,340	33
Galgaduud	446	274	2,521	5,538	116
Gedo	419	33	1,007	3,281	9
Hiraan	489	318	1,584	4,168	78
Lower Juba	297	24	190	2,670	4
Lower Shabelle	243	69	122	2,881	9
Middle Juba	26	2	0	152	0
Middle Shabelle	192	19	9	1,564	1
Mudug	357	152	1,956	3,594	60
Sanaag	0	28	1	0	0
Sool	73	34	662	799	73
Togdheer	0	0	0	9	0
Woqooyi Galbeed	0	2	0	0	0
"ayn" (source value)	0	40	0	0	0
"nugal" (source value)	0	27	5	201	0
Missing region	0	0	0	100	0
Unmatched geometry*	0	0	0	0	1
Total	3,341	1,641	11,233	38,156	478

*One hazard record has no usable geometry in the supplied reference. Awdal and the exact spelling Nugaal have no separate row in that reference; their availability requires verification. Do not silently merge the source value "nugal" with Nugaal.

Source: supplied IMSMA reference [1]; editorial review, 6 Oct 2026.

Use geography with care

ADMINISTRATIVE DETAIL NEEDS VERIFICATION

The supplied document provides state and region summary tables, but no usable district-by-district or settlement-by-settlement breakdown. Request those levels from SEMA rather than inferring them from regional totals.

EORE DISTRICT ATTRIBUTION

The source flags 8,463 of 38,156 EORE records (22.2%) recorded under "Waaberi" across multiple regions. Those district labels require validation before district-level comparison or mapping.

State and region are different views. Recorded region and state labels are not a clean one-to-one hierarchy. Mudug records, for example, appear under more than one state label. Do not add state and region totals together or assign a region wholly to one state from these tables.

Names and boundaries. Preserve the source values "ayn" and "nugal" as flagged labels until reconciled. Administrative names describe source records; they do not determine political status or boundaries. Any future map should identify its boundary source and date.

READING AVAILABILITY LABELS

Label	Meaning
Available	Records identified in the current source; release is a separate decision.
Partial	Some coverage exists, with stated gaps or quality limits.
Request / Approval Required	SEMA review is needed before the requested data can be shared.
No shared records identified	No records identified within the available source and query scope.
Verification required	Evidence is insufficient to confirm coverage or interpretation.

Source: supplied IMSMA reference [1]; editorial review, 6 Oct 2026.

Hazardous areas: status snapshot

Confirmed Hazardous Area (CHA) and **Suspected Hazardous Area (SHA)** are the two recorded area types. The supplied summaries identify 368 CHA, 109 SHA and one additional record without complete classification.

Recorded status	Records
Open	289
Closed	110
Cancelled	44
Released	26
Suspended	6
In progress	2
Classification not specified	1
Total	478

A SNAPSHOT, NOT A HISTORICAL STATUS LOG

These figures describe the recorded status in the source snapshot. They do not reconstruct what was open or closed at an earlier date. A past-date request needs suitable dated records and SEMA verification.

Reconciliation: The six specified statuses sum to 477; the additional unclassified record brings the total to 478. Closed, Released and Cancelled sum to 180, matching the combined regional column. The reference spatially attributes 477 hazards; one lacks usable geometry.

Interpretation: Catalogue status labels are not a safety certification or permission to enter an area.

Sources: overview status breakdown [2]; regional totals cross-checked against [1].

Specify the period you need

Enter a clear period in the website's **Time period** field. SEMA will confirm whether the requested dataset has a suitable event, survey, task or activity date and whether it supports the requested summary.

Request type	Example wording (illustrative only)
Exact date	Activities dated 15 June 2024.
Month	1 June to 30 June 2024, inclusive.
Quarter	1 April to 30 June 2024, grouped by month.
Calendar year	1 January to 31 December 2024, grouped by region.
Custom range	1 July 2023 to 30 June 2024; specify the relevant activity date.

DO NOT TREAT POOLED DATES AS DATASET COVERAGE

The reference's state and region date ranges combine information across datasets and include early-date outliers. They do not establish the earliest or latest date for each dataset in each location.

What changed in this edition: Dataset-specific year ranges from the original overview are not repeated as confirmed coverage because the supplied geographic tables do not substantiate them. SEMA should confirm exact coverage for each request.

Created and last-edited timestamps are not automatically the date of an event or the date contamination began. Ask which date field is being used, and how missing or questionable dates are handled.

Source: supplied IMSMA reference [1]; editorial review, 6 Oct 2026.

Public metadata, reviewed release

This catalogue helps identify what SEMA may be able to provide. It does not grant permission to access or redistribute the underlying records.

PUBLIC METADATA

- Dataset names and descriptions
- Aggregate record counts
- Broad geographic coverage
- Qualified date coverage
- Recorded status categories
- Quality and access limitations
- Source snapshot and revision date

CONTROLLED INFORMATION

- Personal or informant details
- Sensitive victim or survivor information
- Exact sensitive hazard coordinates
- Unpublished operational records
- Partner-restricted information
- Internal access details or credentials
- Unapproved record-level exports

SEMA REVIEW DETERMINES THE RESPONSE

Requests are reviewed for availability, sensitivity, intended use and release conditions. SEMA may seek clarification, provide an aggregate or public alternative, require an agreement, or decline restricted information.

Approved delivery may use email, a secure download, dashboard access or a formal data-sharing agreement. Submission and acknowledgement do not constitute approval, and this catalogue does not promise a response deadline.

Sources: original public catalogue [2] and website request process [3].

From catalogue to request

INCLUDE THESE DETAILS

Dataset and indicators - identify the topic and fields or summary required.

Geography - name the region and any district or settlement of interest.

Period - give start and end dates and the date concept you mean.

Purpose and detail - explain the intended use and who will access the output.

Format and deadline - state your preference and any time constraint.

SUBMIT AN INFORMATION REQUEST

sema.org.so/en/data-request

For follow-up: dahiru@sema.org.so

Keep the reference displayed after successful submission.

The current route is a manually completed information request form. The catalogue does not promise an interactive map, combined filters or automatic form prefilling.

SOURCES AND EDITORIAL METHOD

[1] IMSMA Core Geographic Data Catalogue. Supplied reference dated 6 October 2026. State and region tables reconcile point-dataset totals, CHA/SHA totals and regional aggregates. District and settlement detail is not supplied in those tables.

[2] SEMA Mine Action Data Catalogue. Original October 2026 overview: source of the individual hazard status breakdown and reported empty shared clearance layers. These items were not independently re-queried for this edition.

[3] SEMA website information-request workflow. Form fields, review steps and the request URL were checked against the website project on 6 October 2026.

Version 1.2 | 7 October 2026. Website branding, partner logos and disclaimer added. Figures and source qualifications are unchanged from v1.1; no new IMSMA extraction. Refresh figures and source dates after a validated extract.
